

Applying Science to the Conservation & Management of Natural Resources throughout Northwest Mexico

May 25-27, 2010
Loreto, B.C.S., Mexico

The Ocean Foundation, in collaboration with a diverse collection of research institutions, government agencies and non-governmental organizations, cordially invites you to save the date for a conservation science symposium discussing the application of science to the conservation and management of natural resources throughout Northwest Mexico, to be held May 25 to 27, 2011 in Loreto, B.C.S., Mexico.

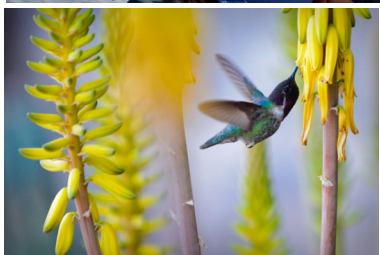

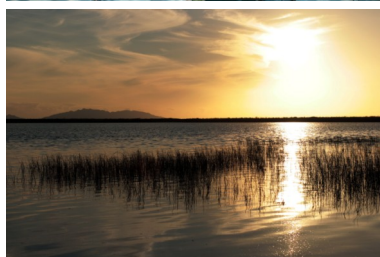

Through a series of oral and poster presentations, panel discussions, and workshops we will explore marine and terrestrial issues, helping to define priorities for conservation throughout the region.

The topics of discussion will include today's most pressing issues such as:

- Climate change and its impacts on habitat and biodiversity,
- Freshwater quality, quantity, and alternative sources of water,
- Fisheries and coastal communities,
- Development, urbanization and the sustainable use of natural resources, and
- Natural protected areas, connectivity and biodiversity,

We look forward to seeing you in Loreto!
